Performance Based Seismic Engineering of Buildings: Interim Recommendations (SEAOC, 1995).

These recommendations were developed in response to the concern that the \$40 billion cost of the Northridge earthquake was too high and the damage too disruptive to local communities.

Performance based seismic engineering is the modern approach to earthquake resistant design. Rather than being based on prescriptive mostly empirical code formulations, performance based design is an attempt to predict

buildings with predictable seismic performance. Therefore, performance objectives such as life-safety, collapse prevention, or immediate occupancy are used to define the state of the building following a design earthquake.

Examples of conceptual frameworks for performance-based design include SEAOC Vision 2000 (Structural Engineers' Association of California, 1996; Fig. 1), FEMA 273, and EERI (Earthquake Engineering Research

Institute, 1998). In contrast to the traditional approach, performance-based design requires an explicit prediction of the structure's performance at each of several postulated ground-motion levels corresponding to a set of performance objectives.

Seismic Engineering - an overview | ScienceDirect Topics

Performance-based earthquake engineering Situated in one of the most seismic regions of the world is Santiago, Chile. With its large collection of tall buildings set against the backdrop of the Andes Mountains, it was a superb location for the 16th World Conference on Earthquake Engineering.
