In the very near future, “smart” technologies and “big data” will allow us to make large-scale and sophisticated interventions in politics, culture, and everyday life. Technology will allow us to solve problems in highly original ways and create new incentives to get more people to do the right thing. But how will such “solutionism” affect our society, once deeply political, moral, and irresolvable dilemmas are recast as uncontroversial and easily manageable matters of technological efficiency? What if some such problems are simply vices in disguise? What if some friction in communication is productive and some hypocrisy in politics necessary? The temptation of the digital age is to fix everything—from crime to corruption to pollution to obesity—by digitally quantifying, tracking, or gamifying behavior. But when we change the motivations for our moral, ethical, and civic behavior we may also change the very nature of that behavior. Technology, Evgeny Morozov proposes, can be a force for improvement—but only if we keep solutionism in check and learn to appreciate the imperfections of liberal democracy. Some of those imperfections are not accidental but by design. Arguing that we badly need a new, post-Internet way to debate the moral consequences of digital technologies, *To Save Everything, Click Here* warns against a world of seamless efficiency, where everyone is forced to wear Silicon Valley's digital straitjacket.

Argues that technology is changing the way we understand human society and discusses how the disciplines of politics, culture, public debate, morality, and humanism will be affected when responsibility for them is delegated to technology.

In the very near future, “smart” technologies and “big data” will allow us to make large-scale and sophisticated interventions in politics, culture, and everyday life. Technology will allow us to solve problems in highly original ways and create new incentives to get more people to do the right thing. But how will such “solutionism” affect our society, once deeply political, moral, and irresolvable dilemmas are recast as uncontroversial and easily manageable matters of technological efficiency? What if some such problems are simply vices in disguise? What if some friction in communication is productive and some hypocrisy in politics necessary? The temptation of the digital age is to fix everything—from crime to corruption to pollution to obesity—by digitally quantifying, tracking, or gamifying behavior. But when we change the motivations for our moral, ethical, and civic behavior we may also change the very nature of that behavior. Technology, Evgeny Morozov proposes, can be a force for improvement—but only if we keep solutionism in check and learn to appreciate the imperfections of liberal democracy. Some of those imperfections are not accidental but by design. Arguing that we badly need a new, post-Internet way to debate the moral consequences of digital technologies, *To Save Everything, Click Here* warns against a world of seamless efficiency, where everyone is forced to wear Silicon Valley's digital straitjacket.

Our gadgets are getting smarter. Technology can log what we buy, customize what we consume and enable us to save and share every aspect of our existence. In the future, we're told, it will even make public life - from how we're governed to how we record crime - better. But can the digital age fix everything? Should it? By quantifying our behaviour, Evgeny Morozov argues, we are profoundly reshaping society - and risk losing the opacity and imperfection that make us human.

To Save Everything, Click Here, the new book by the acclaimed author of *The Net Delusion*, Evgeny Morozov, is a penetrating look at the shape of society in the digital age, of the direction in which the 21st Century may take us, and of the alternate paths we can still choose. Our society is at a crossroads. Smart technology is transforming our world, making many aspects of our lives more convenient, efficient and - in some cases - fun. Better and cheaper sensors can now be embedded in almost everything, and technologies can log the products we buy and the way we use them. But, argues Evgeny Morozov, technology is having a more profound effect on us: it is changing the way we understand

human society. In the very near future, technological systems will allow us to make large-scale and sophisticated interventions into many more areas of public life. These are the discourses by which we have always defined our civilisation: politics, culture, public debate, morality, humanism. But how will these discourses be affected when we delegate much of the responsibility for them to technology? The temptation of the digital age is to fix everything - from crime to corruption to pollution to obesity - by digitally quantifying, tracking, or gamifying behaviour. Yet when we change the motivations for our moral, ethical and civic behaviour, do we also change the very nature of that behaviour? Technology, Morozov proposes, can be a force for improvement - but only if we abandon the idea that it is necessarily revolutionary and instead genuinely interrogate why and how we are using it. From urging us to drop outdated ideas of the internet to showing how to design more humane and democratic technological solutions, *To Save Everything, Click Here* is about why we should always question the way we use technology. 'A devastating exposé of cyber-utopianism by the world's most far-seeing Internet guru' John Gray, author of *Straw Dogs* 'Evgeny Morozov is the most challenging - and best-informed - critic of the Techno-Utopianism surrounding the Internet. If you've ever had the niggling feeling, as you spoon down your google, that there's no such thing as a free lunch, Morozov's book will tell you how you might end up paying for it' Brian Eno 'This hard-hitting book argues people have become enslaved to the machines they use to communicate. It is incisive and beautifully written; whether you agree with Morozov or not, he will make you think hard' Richard Sennett, author of *Together* Praise for *The Net Delusion*: 'Gleefully iconoclastic . . . not just unfailingly readable: it is also a provocative, enlightening and welcome riposte to the cyberutopian worldview' Economist 'A passionate and heavily researched account of the case against the cyberutopians . . . only by becoming "cyberrealists" can we hope to make humane and effective policy' Bryan Appleyard, *New Statesman* 'Piercing . . . convincing . . . timely' Financial Times Evgeny Morozov is the author of *The Net Delusion: The Dark Side of Internet Freedom* (which was the winner of the 2012 Goldsmith Book Prize) and a contributing editor for *The New Republic*. Previously, he was a visiting scholar at Stanford University, a Scwhartz fellow at the New America Foundation, a Yahoo fellow at the Institute for the Study of Diplomacy at Georgetown, and a fellow at the Open Society Foundations. His monthly column on technology comes out in *Slate*, *Corriere della Sera*, *El Pais*, *Frankfurter Allgemeine Zeitung* and several other newspapers. He's also written for the *New York Times*, *The Economist*, the *Wall Street Journal*, the *Financial Times* and the *London Review of Books*.

"Provocative and illuminating writings from women at the forefront of the climate movement who are harnessing truth, courage, and solutions to lead humanity forward."--page [4] of cover.

How Google, Facebook and Amazon threaten our Democracy What is the impact of surveillance capitalism on our right to free speech? The Internet once promised to be a place of extraordinary freedom beyond the control of money or politics, but today corporations and platforms exercise more control over our ability to access information and share knowledge to a greater extent than any state. From the online calls to arms in the thick of the Arab Spring to the contemporary front line of misinformation, Jillian York charts the war over our digital rights. She looks at both how the big corporations have become unaccountable censors, and the devastating impact it has had on those who have been censored. In *Silicon Values*, leading campaigner Jillian York, looks at how our rights have become increasingly undermined by the major corporations desire to harvest our personal data and turn it into profit. She also looks at how governments have used the same technology to monitor citizens and threatened our ability to communicate. As a result our daily lives, and private thoughts, are being policed in an unprecedented manner. Who decides the difference between political debate and hate speech? How does this impact on our identity, our ability to create communities and to protest? Who regulates the censors? In response to this threat to our democracy, York proposes a user-powered movement against the platforms that demands change and a new form of ownership over our own data.

A young man seeking to hack into his own unconscious mind. An academic conference on the metaphysics of flies. An apocalyptic world where punctuation has been outlawed. An eating disorder that produces collectible antiques. A mix of allegory, satire, randomly generated numbers, spam messages rearranged into haiku form, plagiarism, and bad writing presented in the more sophisticated if still unpalatable guise of literary experimentation, Phil Jourdan's collection of stories is infuriating, challenging and other marketing buzzwords.

"This book introduces you to R, RStudio, and the tidyverse, a collection of R packages designed to work together to make data science fast, fluent, and fun. Suitable for readers with no previous programming experience"--

"A 22-volume, highly illustrated, A-Z general encyclopedia for all ages, featuring sections on how to use World Book, other research aids, pronunciation key, a student guide to better writing, speaking, and research skills, and comprehensive index"--
