The selected papers in this book deal with Building Information Modelling (BIM) in Design, Construction and Operations. Application of BIM throughout the construction industry is progressing at an accelerated rate, with the development of new software tools. BIM has the potential to alter the way in which different specialities interact before, during and after the construction project. BIM carries the data set for a particular asset through its full life cycle which has important consequences for operations and maintenance as

This book provides a comprehensive understanding on disaster resilient housing within the Vietnam context particularly and the developing world generally. The book has identified the root causes of housing vulnerability, restrictions to safe housing development, concepts of disaster resilient housing, key issues/factors implementers and building designers need to consider, and ways of achieving resilient housing outcomes in actual design projects. The design and development of disaster resilient housing has been framed into three main themes: (i) community consultation, (ii) the role of built-environment professionals and (iii) design responses for resilience. To achieve these themes, there is a variety of contextual and intervening

conditions that need to be addressed and met to provide an enabling environment for promoting disaster resilient housing. These three themes are among the most arguable issues in recent debates and discussions, academically and practically, regarding disaster risk reduction and safe housing development. In addition, this book also provides the evidence-based design framework for disaster resilient housing upon which design ideas and solutions for safe and resilient housing can be generated and shaped.
